

Solid Sheet

Total Packaging Solutions
'Define, Develop, Deliver...Improve'

Polypropylene - PP & High Density Polyethylene - HDPE

Both materials are tough and durable with the PP sheet being stiffer than the HDPE. They have excellent low temperature impact and chemical resistance, UV resistant and are available in a wide range of colours, surface effects and textures. There are special grades available that include conductive, talc filled flame retardant and anti slip.

We can define our customer needs and develop a handling material solution using solid sheet material which will maximise efficiency and at the same time reduce costs as well as being fit for purpose. The extruded sheets are very cost effective and can be used across all industries.

sales@cppltd.com

Features:

- UV Resistant and Fire Resistant;
- Extremely rigid;
- Variety of colours and finishes;
- Outstanding chemical resistance;
- Printing and laminating finishes available;
- Excellent thermal and acoustic insulation;
- Rot proof and moisture resistant;
- Suitable for contact with foods and drinking water;
- Can be laminated with various materials such as foam, textiles and tiles; and
- 100% recyclable.

Applications:

- Environmental Exclusion Fencing;
- Automotive interior panels and cladding;
- Boot liners;
- Point of Display solutions; and
- Wall protections.
